

RAYPAK RP2100 DIGITAL... THE REALLY SMART HEATER WITH A BRAIN.

BENEFITS

- Digital control with liquid crystal display (LCD) for temperature selection and heater settings
- Capron® resin headers prevent rust stains from harming pool surface
- Plumb directly from provided 2" PVC threaded union
- Smart microprocessor controls diagnostic read-out and continuously monitors operating status
- Completely field serviceable
- No condensation to harm heater
- Small footprint
- High efficiency
- Guaranteed high wind reliability
- Looks smart and works smart
- 5 Year Smart Warranty

* Designation for Propane is "EP" and Natural Gas is "EN". Prefix "C" for Cast Iron (ASME) headers; "P" for Plastic (Capron®) headers. Above input ratings are per A.G.A. specifications. Reduce input 4% for each 1000 feet above sea level when installed above 2000 foot elevation. Manufactured under Patent No. 3,623,458. Note: Plastic (Capron®) headers cannot be used for ASME installations.

How to Pick the Right Size Heater

Proper heater size is based on the time required to heat the pool or spa. If water is heated for each intended use, energy-saving rapid heating may be appropriate. If water is gradually heated to the desired temperature and then maintained at that temperature, a smaller heater may be acceptable. To determine proper heater size, use the following formula.

- Desired water temperature _____ °F
 - (Minus) Average air temperature _____ °F
 - (Equals) Total heat rise _____ °F
 - Total heat rise/hours required to heat equals required heat rise per hour.
- Use the charts below to find the appropriate heater for your pool or spa.
