

Steel Step Bead Receiver System

The implementation of the Steel Step Bead Receiver System is complete. All standard steel steps are now produced with the new bead receiver system.

If for some reason, you wish to use the clips and rods, you may do so without any changes to the steel step. All that is required is that you:

1. Order clips and rods.
2. Specify clips and rods on the liner order.

There are no dimensional differences and the clips work the same way as before with the steel steps.

Should any part of the bead receiver be required to replace lost or damaged components, please use the following part numbers:

1. SSC-1099A-PFT is the part number for the bead receiver, available in 10' pieces.
2. SSC-1099B-PFT is the part number for the "Sure Lock" strip, available in 10' pieces.
3. SSC-1099-PFT is the part number for the assembly of both parts as used on the steel steps produced.

Please note: when you receive the step, the track will not have a visible opening. It is covered to keep the track clean and free of debris during construction. Prior to hanging the liner, pull out the cover strip to expose the liner receiver opening. Simply grab the end, pull up and remove the filler strip. You are now ready for the liner.

Important: You must specify the bead option on the liner order form in the vinyl over information section.
