# Quick Reference Guide – Programming

ColorLogic - Networked LEDs

18. Rainbow (S)   20. Custom Fade (S)
19. Harmony (S)   21. Custom Chase (S)

With module, network LEDs also offer these shows (on top of those mentioned on front page)

STEP 1

• Press **MENU** until | Configuration Menu–Locked | appears, then hold down **<** & **>**

Menu–Unlocked should appear after 5 seconds

• Press **>** until | ColorLogic Config. + to view/change | appears, then press **+**; | Find ColorLogic + to start |

will appear, press **+** to start sequence

• Once find is **Completed** Scroll to the **>** to label light(s), use the **±** to change and **>** to navigate forward (helpful in complicated shows)

STEP 2

• Select AUX for light(s) and locate by pressing **>** | Aux1 Config. + to view/change | (example)

• Press **+** then press **>** until | Aux1 Relay Standard | appears

• Press **+** until relay type is set to **ColorLogic** , then press **>** button

• Assign LT(s) for this show by pressing **±**, use **>** button to advance

• Assign order of sequence using **±**, use **>** button to advance

Step 2 should be repeated for any open relays we wish to use as ColorLogic shows

STEP 3

• Press **MENU** until | Settings Menu | appears and press **>** until

the first AUX containing a show appears | Aux1 Settings + to view/change | (example)

• Press **>** to navigate through program, color, speed, motion and brightness and the **±** to make changes

Step 3 should be repeated for all relays identified as ColorLogic
